• The 100 year old art nouveau Gresham Palace is Four Seasons' first hotel in Hungary and is located opposite the historic 150 year old Chain Bridge and Royal Palace.

• During recent renovations a fitness suite was located directly above some of the Palace's most exclusive rooms and there was concern that noise generated from activities in this new suite would cause a problem to guests accommodated below.

• A CDM-LAT floating floor was selected because it has a proven success rate in many similar projects across Europe and because the system is easy to install. The CDM-LAT floor was designed to provide maximum isolation and minimum deflection.
