

CDM-PHS-S Elastomer Acoustic Suspension Hangers have been designed to support suspended ceiling and wall systems as well as to decouple equipment or ductwork

System features:

- Cost effective
- Quick and easy to install
- Standard hangers are:

CDM-PHS-S-150	10-20 kg per hanger
CDM-PHS-S-350	20-45 kg per hanger
CDM-PHS-S-600	40-90 kg per hanger
- Natural frequency between 12 and 18Hz
- Can be used to support most suspended ceiling systems
- Variable void depths are achievable (CDM-PHS-S hanger depth is 50mm)
- Steel elements are Zinc plated
- For optimum results a resilient perimeter strip should be used to provide lateral isolation between the suspended ceiling and adjacent walls. A wide range of roll sizes are available

To specify which CDM-PHS-S hangers you require, CDM's engineers will need the following information:

- The weight and construction of the supported ceiling
- The weight of any elements supported off the suspended ceiling or directly off a hanger
- The required void between the supporting soffit and the suspended ceiling
